Profile

Software engineer with 6+ years of experience

- Launched in production two investment-related projects in Vivid Money
- Built strong highly-motivated team in WIO UAE, always help team members to grow and have job satisfaction
- Always in close contact with business in order to fulfil our customers' needs

Employment History

Lead Software Engineer at WIO UAE, Abu Dhabi

07/2021–Present

Head the development of investment project.

We started the project by laying down the architecture and domains decomposition and evaluating offers from our partners

Organized the process of work in our team (work with requirements, ways of creating documentation, code style approach, ways of interaction with the mobile team, testing approach).

Organized and supported the process of continuous improvements (technical debt meetings, code improvements meetings, planning of technical debt tasks for each of the sprints)

Communication with the product owner, requirements gathering, and translation to developers' language. Also, I took part in creating requirements as I have experience in investment projects.

Planning of sprints, determining the team's capacity, helping the team to distribute the tasks among team members

One on one meetings with developers, I provide feedback, receive feedback and ensure that developers are happy or help them, to solve their problems, also help them to determine directions for growth.

Created the portrait of the ideal team member based on values that all team members share, which we use in our hiring process.

One of the goals was to make investments project an API provider that allows further expansion to markets in other countries and partnership with other companies

Lead Software Engineer at Vivid Money, Moscow

05/2019–07/2021

Joined Vivid Money as a Java Developer in an Investment platform project, gradually taking the role of technical leader.

Contract-First Design

Languages

English C1
Russian Native speaker

My team developed from scratch two products: the Stock Rewards product and the Investment product.

Stock Rewards - is the functionality of receiving cash backs in a form of fractional shares.

Investments - investments functionality for retail customers.

We started the project by investigating the domain and laying down the architecture and development process.

I was responsible for

1. designing the architecture and its implementation
2. designing and developing interservice communications
3. communication with business leader
4. business tasks decomposition and distribution among backend developers

In Vivid Money, I also had a chance to practice a lot in one on one meetings, goal settings, and developers' motivation.

As well obtained an experience in presentation of the results to the clients and negotiations with partners.

In general, it was a cool experience of creating "clean code" projects with rigorous code review processes and significant test coverage, that were delivered to production and are successfully serving their clients.

Software Developer at Tinkoff bank, Moscow

04/2018–05/2019

Was a part of the mortgage project team. Our team implemented a product that allowed clients to submit their mortgage applications to multiple banks and get the best offer.

We were developing the integration layer of the platform, this included the development of the API for frontend, integration with core banking services and business logic of mortgage application processing

Also took part in the development of workforce management system, we were solving the optimization problem of shift distribution among employees.

In Tinkoff bank I made my first steps in leadership, leading a team of 2 interns.

Java Developer at Sberbank, Moscow

06/2017–04/2018

My team was developing microservices for multiple directions of the PPRB (Business Development Support Platform).

1. Orchestrator that implemented functionality of different money transfers between accounts and deposits
2. Pricing engine
3. Internal application for modification of banking products (accounts, cards) used by operators

Junior Java Developer at AT Consulting, Moscow

10/2015–06/2017

Took part in two projects of the company.

In the first project, I was a part of the team which developed the client personal account functionality for the real estate register system.

The second project is an internal product of the company, the “Catalog of products” used as a showcase of the company’s products.

Education

**Bachelor, Software Engineering, Higher School of
Economics, Moscow**

09/2013–09/2017

GPA: 8.19
